

Practical Test: 2

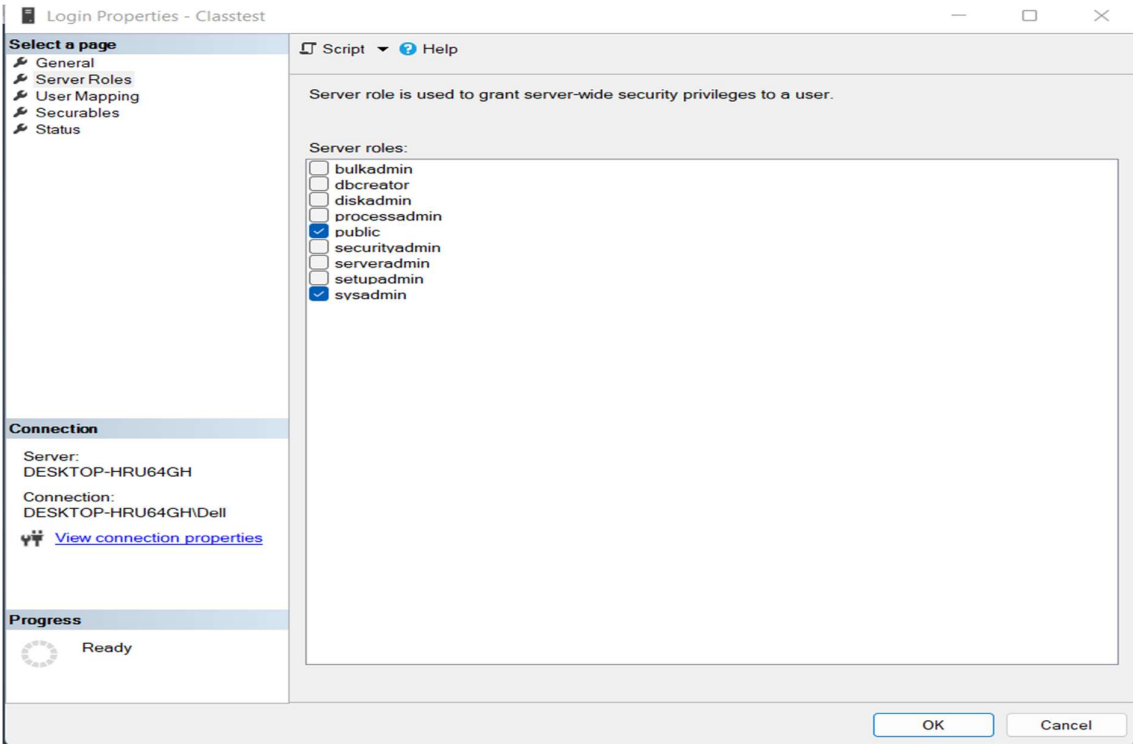

CREATING LOGIN

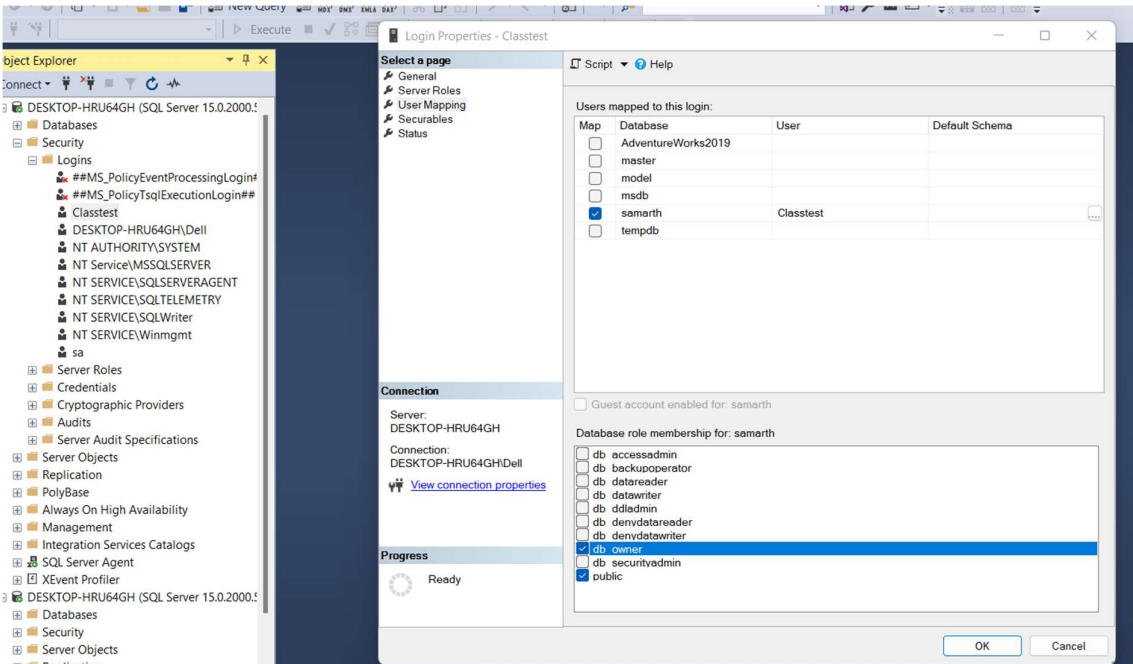

Connect using the login and validate the given permission

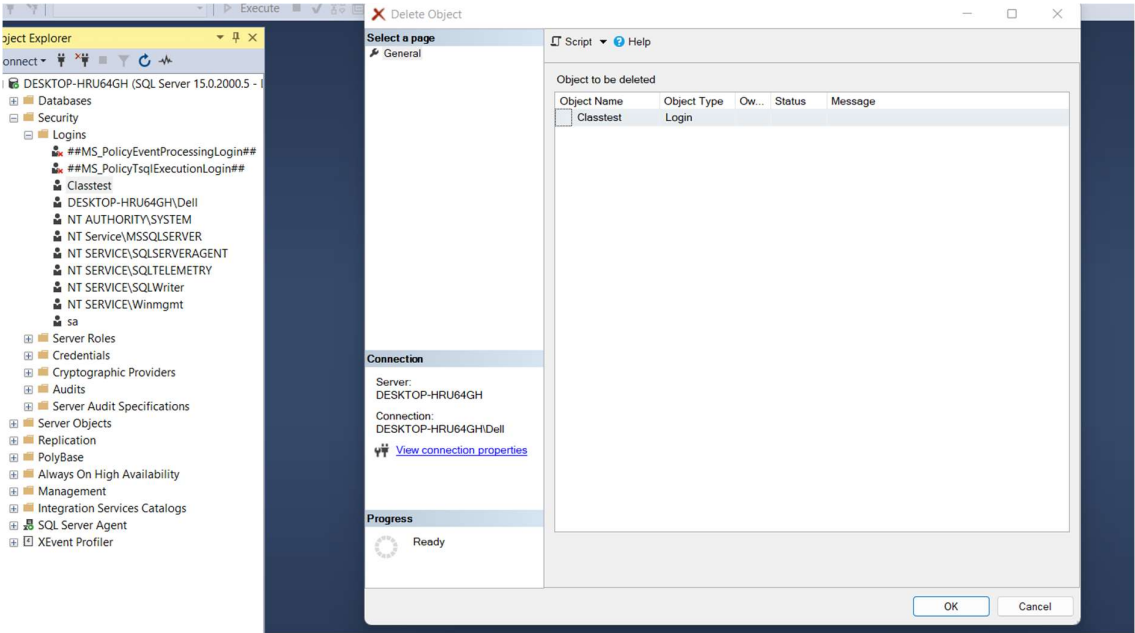

Assign instance level permission

Assign Database level permission

delete the login

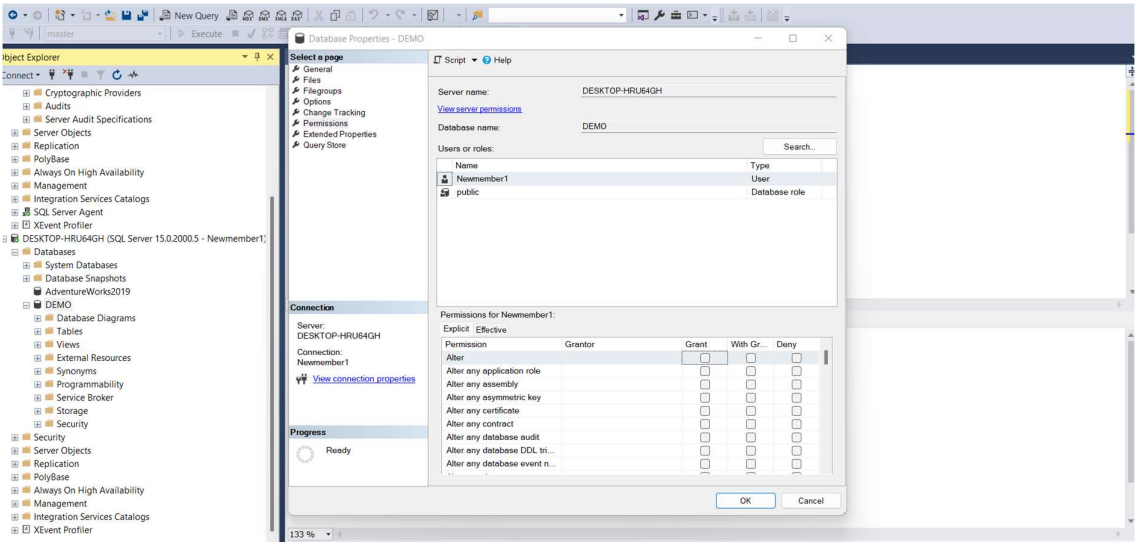

Scenario based:

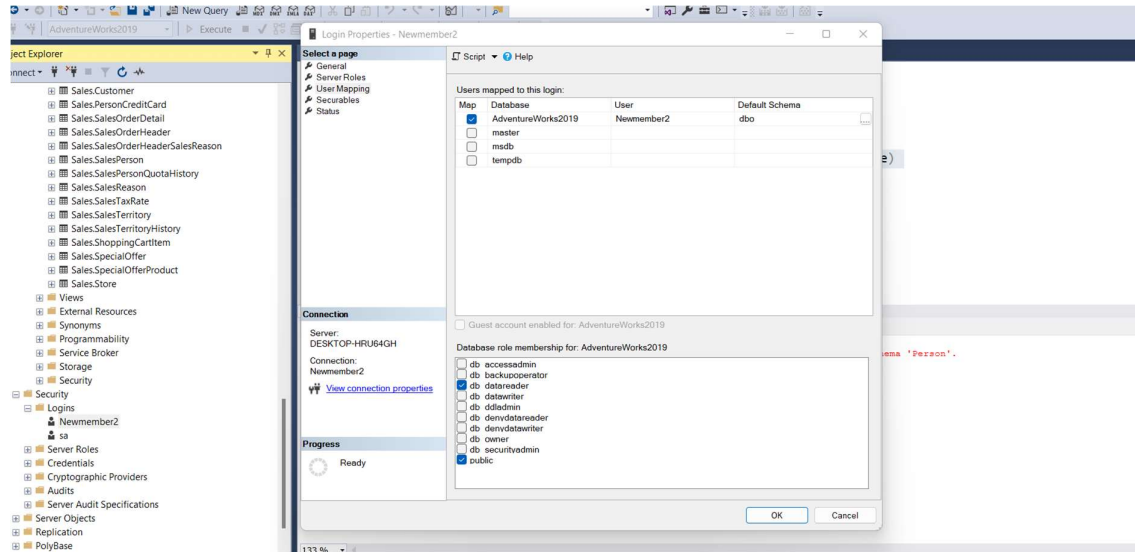

New member to the team, provide him/her the right level of access

Created new login: Newmember1

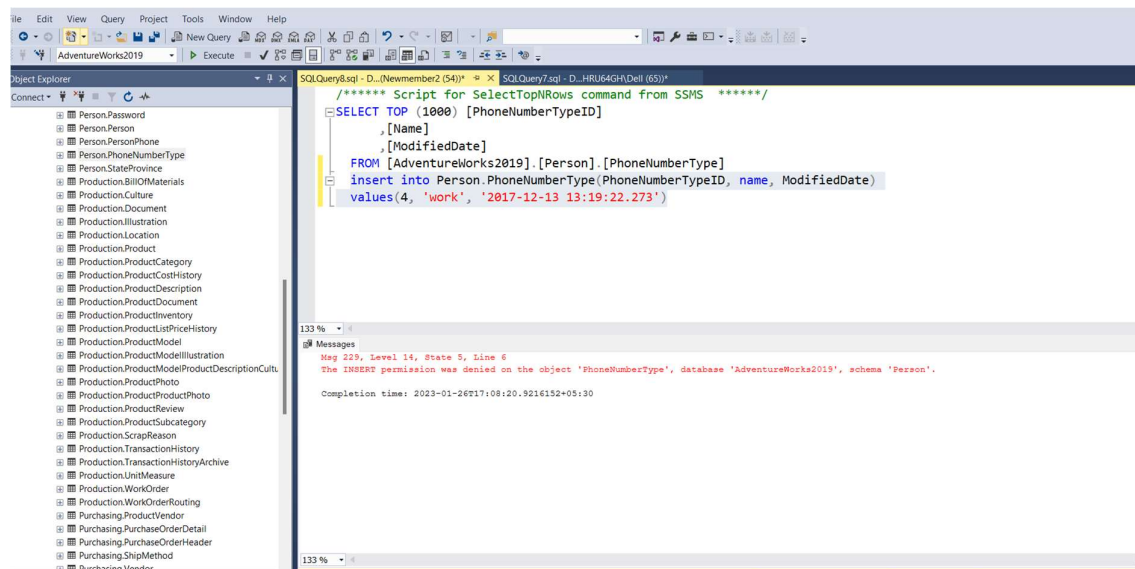

and gave no access to other database except DEMO database.

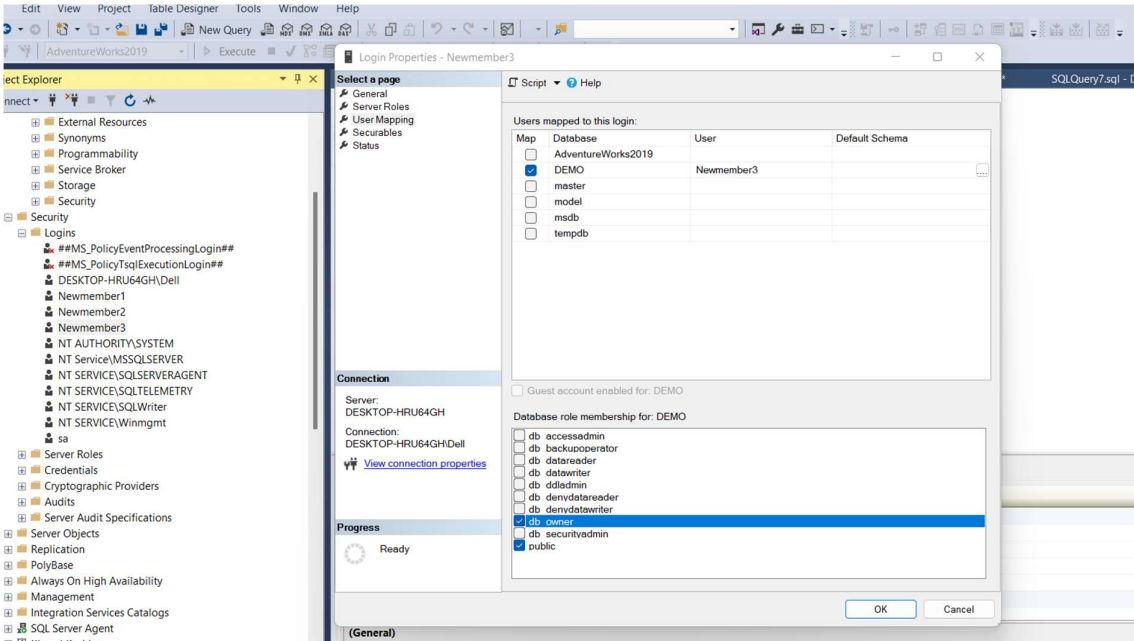

Created LOGIN Newmember2
given Only read access to AW database.

As it shows if we trying to add new data; it fails as we set the database for read only.

NewMember3:
Full access in Demo database

Read access to AW database
